

Science Vocabulary – week 3

meter – metric unit of length

liter – metric unit of liquid volume

gram – metric unit of mass

volume - the amount of space an object occupies

mass – the amount of matter within a substance

weight – a measure of the pull of gravity on an object's mass

length – a linear distance

graduated cylinder – lab equipment used to measure liquid volume and volume of irregular objects

triple beam balance – lab equipment used to determine the mass of an object

technology– how people change the world around them to meet their needs and solve practical problems
